

About the Lidcombe Program

The Lidcombe Program is a behavioural intervention, developed by **Professor Mark Onslow** and his colleagues at the **Australian Stuttering Research Centre** to treat stuttering in preschool aged children.

After training, speech-language pathologists will be prepared to teach parents to administer appropriate feedback about fluency and stuttering to their children in their everyday-speaking environment and to monitor treatment goals and progress.

Studies have shown that this is an efficacious and effective evidence-based treatment for stuttering. The Lidcombe Program has been adjusted for school-aged children and special populations.

Two-day Basic Lidcombe Workshop (1.2 CEUs)

Learner's Objectives: As a result of this activity, the participant will be able to: Identify literature and efficacy data that support the use of the Lidcombe program with preschool children who stutter; Use the Lidcombe Program; Demonstrate appropriate problem-solving with other Lidcombe trained clinicians.

The Lidcombe Program course is offered for 1.2 ASHA CEUs (Professional area, Intermediate level). Disclosures: The presenters receive reimbursement for their presentations. No relevant non-financial relationships to disclose.

The University of Houston is approved by the Continuing Education Board of the American Speech-Language-Hearing Association (ASHA) to provide continuing education activities in speech-language pathology and audiology. See course information for number of ASHA CEUs, instructional level and content area. ASHA CE Provider approval does not imply endorsement of course content, specific products or clinical procedures.
